Registration dossiers for the 2013 Deadline

Poland

Last update: 30/08/2013

Summary for the 2013 deadline

		% of EEA
Number of Registrants	119	3.73%
Number of Registrations	155	1.72%

Detailed Statistics on Number of Registrations

Breakdown by Registration Type

REACH covers different types of registrations: either a standard registration (Article 10) or a limited registration for substances with intermediate uses only (Articles 17 and 18). A substance can be registered for up to three of these registration types with one dossier. This is why the numbers below do not add up to the total number of registrations

	# Registrations	% of EEA
Registered as standard registration	142	1.96%
Registered as intermediate	14	0.75%
Transported isolated intermediates	*13*	0.87%
On-site isolated intermediates	*3*	0.61%

Joint Submission is a fundamental principle of REACH. Its aim is to reduce costs and avoid unnecessary testing on animals.

This table provides a breakdown of the number of registrations submitted in a joint submission (multiple registrants) compared to individual submissions (single registrants). The number of these individual registrations shows cases where there is only one company registering a particular substance, but also cases where multiple companies have registered individually the same substance. The latter cases may indicate a breach of the legal obligation to register jointly. ECHA will make an analysis of the overall situation once all dossiers have been processed.

	# Registrations	% of EEA
Registrations in joint submissions	145	1.74%
Lead	*3*	0.14%
Member	*142*	2.30%
Individual Registrations under REACH	10	1.40%
TOTAL	155	1.72%

Breakdown by Registrant Company Size

The table below shows the breakdown of registrations by company size as indicated by the companies. ECHA will verify the self-declarations as micro, small or medium size (SME) at a later stage. Further information on SMEs under REACH and the verification process is available at (link to http://echa.europa.eu/web/guest/support/small-and-medium-sized-enterprises-smes).

	# Registrations	% of EEA
Registered by a large company	60	0.82%
Registered by a SME	95	5.49%
Medium company	29	2.95%
Small company	48	9.38%
Micro company	18	7.63%
TOTAL	155	1.72%

Breakdown by Role in Supply Chain

The table below shows the breakdown of registrations according to the role as manufacturer, manufacturer and importer, importer and Only Representative.
Non-EU companies can export to the European Union through two different routes under REACH: either via an importer who has registered appropriately the substance, or by appointing an Only Representative who acts on the behalf of their existing customers. The number of registrations received from importers and Only Representatives thus indicates that REACH is functioning for non-EU companies.

	# Registrations	% of EEA
Manufacturer	118	3.27%
Manufacturer and Importer	10	0.92%
Importer	23	1.02%
Only Representative of a non-EU manufacturer	4	0.19%
TOTAL	155	1.72%
