Comment received				
In reaction to the two questions posed in the current targeted consultation on the harmonised classification of the three DTPA:s the SE CA would like to give the following responses: 1. based on the information provided by BASF, Dow and Nouryon the current RAC opinions on the classification for reproductive toxicity of these substances as Repr. 1B H360D should not be revised. 2. setting a higher specific concentration limit for the DTPA:s appears justified.
